/aɪ duː/ — "I do it for you."

Your AI That Gets Things Done.

The complete guide to all 59 iddu features — one family health front desk: appointments, insurance cards, visit notes, bills decoded, and an AI agent that calls the clinic so you never wait on hold.

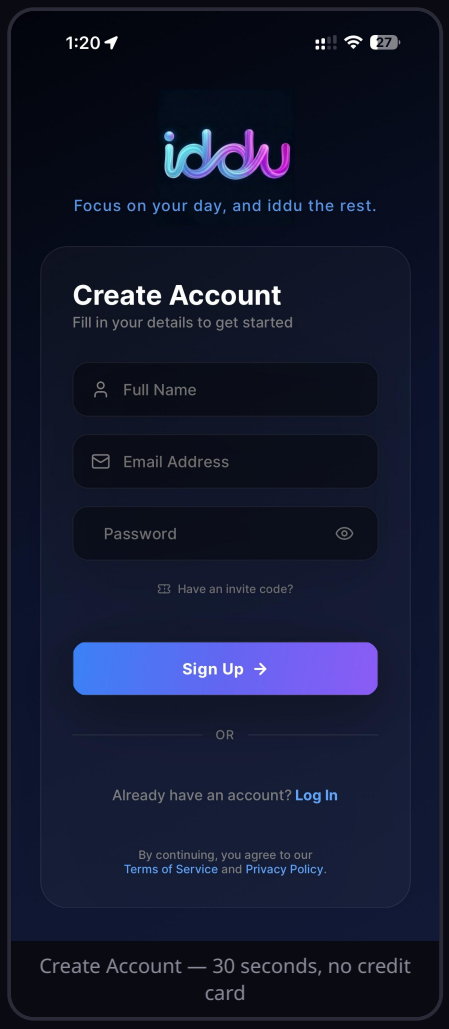

iddu.app · Now in TestFlight beta — iOS · Zero Data Sold. Ever.

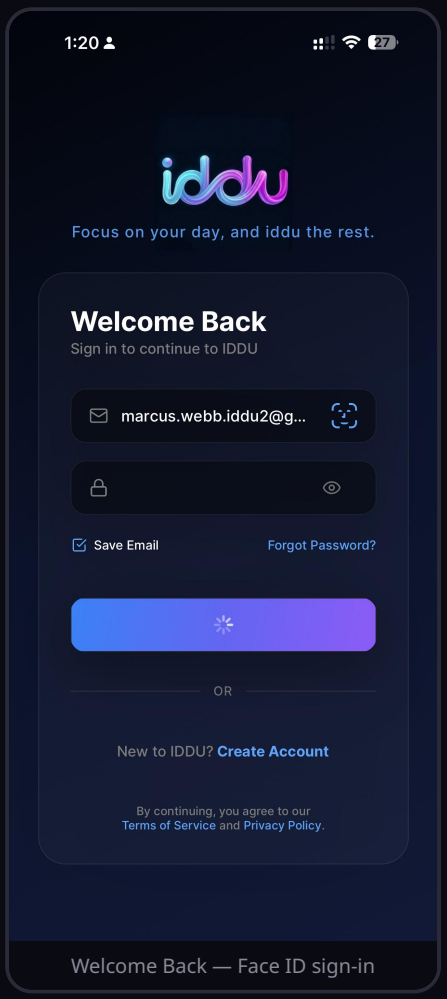

CHAPTER 1

First Run: Onboarding & Auth

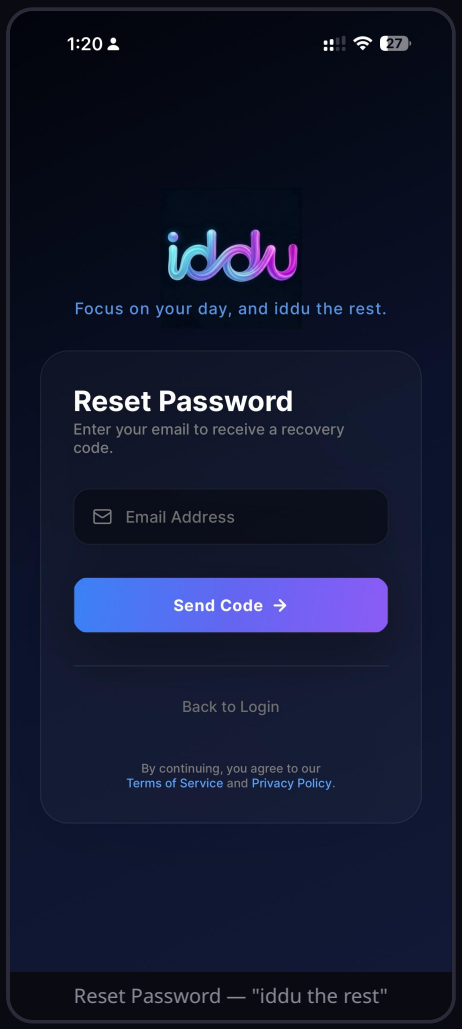

Thirty seconds to value, bank-level security underneath. Health data deserves both.

Create Account — 30 seconds, no credit card

Welcome Back — Face ID sign-in

Reset Password — "iddu the rest"

1. **Onboarding carousel + account creation**
   Three slides explain the whole idea — AI scheduling, the voice agent, smart reminders — then name, email, password and you're in. "Focus on your day, and iddu the rest." No credit card, no phone number required up front.
2. **Sign in + Face ID**
   "Save Email" pre-fills your login next time; reopen the app and Face ID fires automatically — no buttons, no friction. Your family's health in under two seconds.
3. **Forgot password + verification code**
   Branded reset flow with a 6-digit code screen that tells you outright your verification is encrypted and secure. In a health app, you never let the user wonder whether their data is safe.

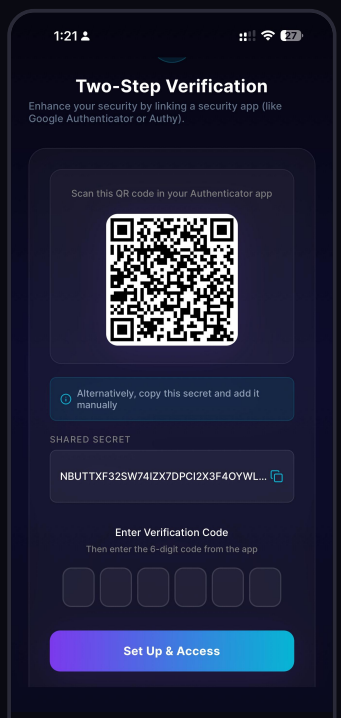

CHAPTER 1 (CONTINUED)

Security & Verification

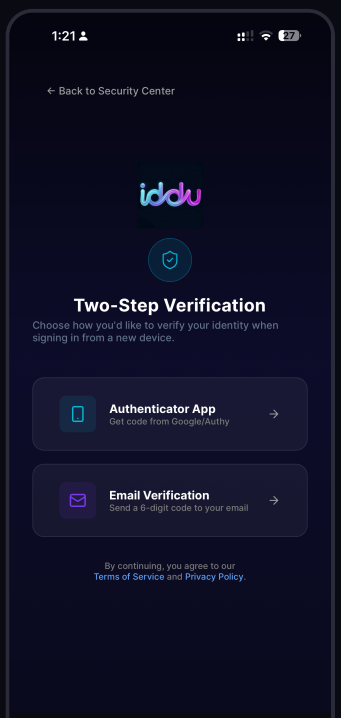

Bank-level MFA, trusted devices, emergency codes — and proof your account is protected.

4 Two-step verification (MFA)

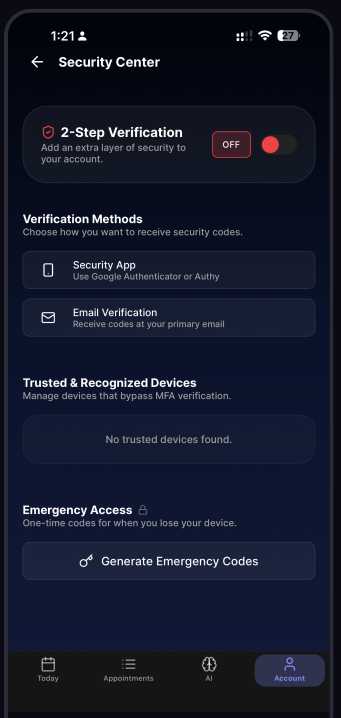

Scan the QR code in your authenticator app, save the shared secret, enter the 6-digit code — "Security Verified." Or choose email verification instead. Trust a device for 30 days so it doesn't nag you daily.

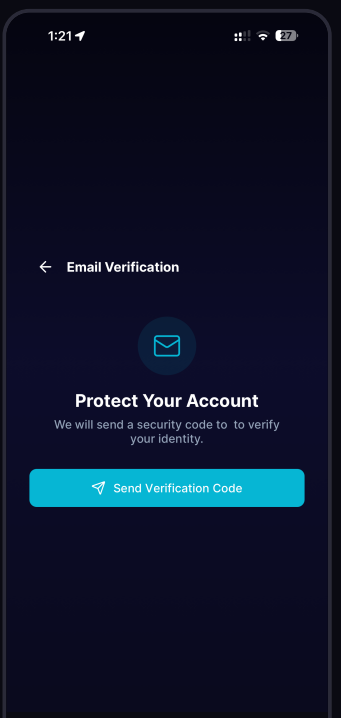

Scan the QR in your authenticator app

Authenticator app or email — your choice

Security Center: devices + codes

Protect Your Account — email verification

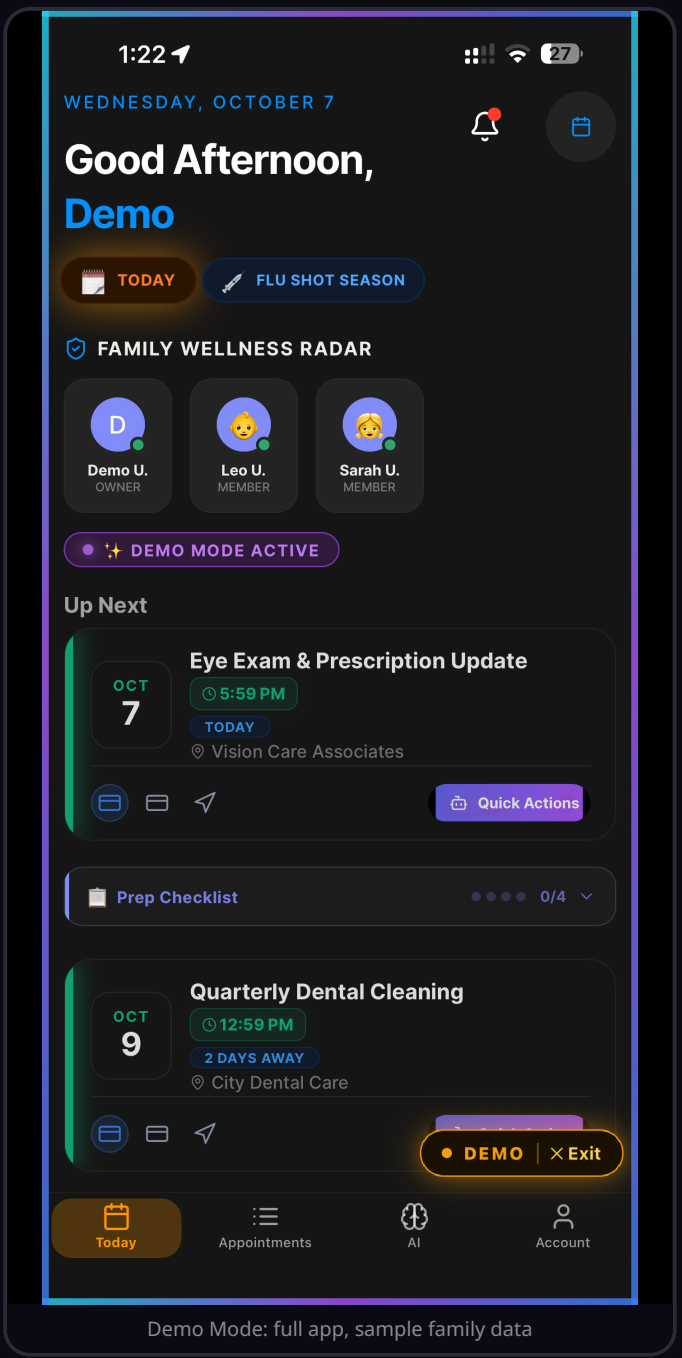

CHAPTER 1 (CONTINUED)

Demo Mode

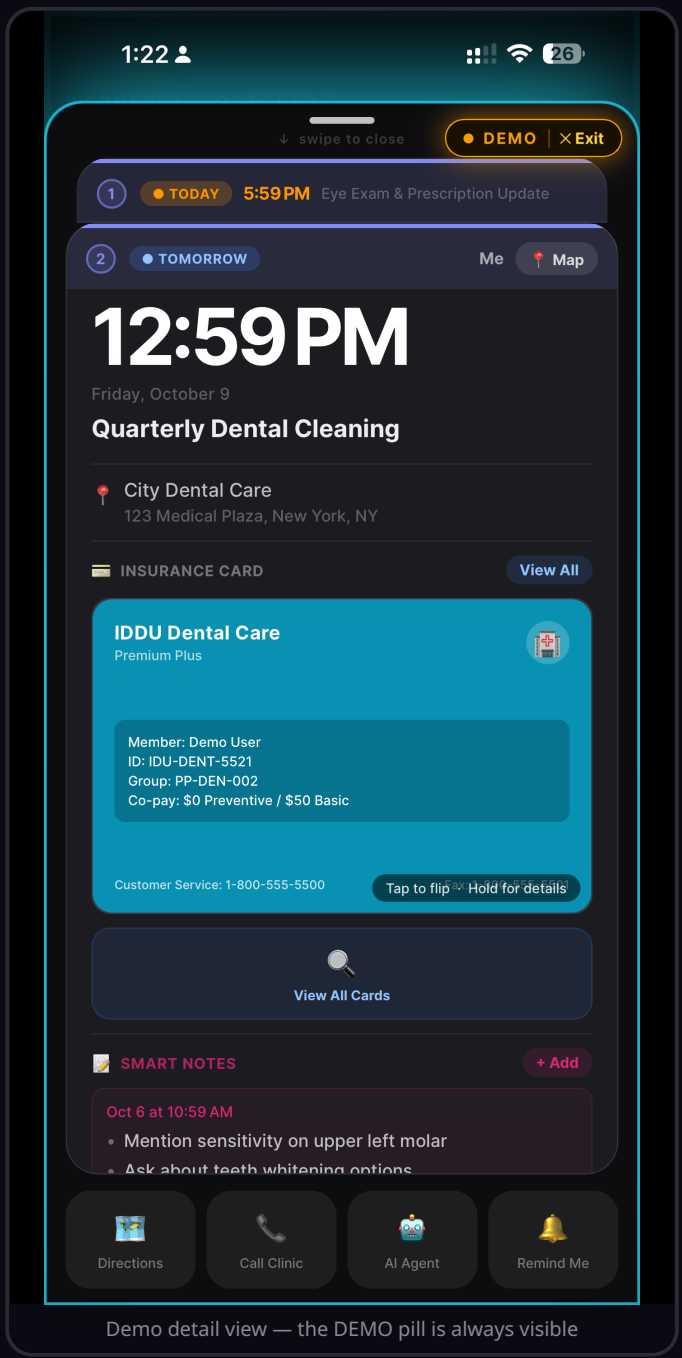

Try everything, commit to nothing.

5 Demo Mode

"Try Demo Mode" loads the entire app with sample data — no sign-up. A "DEMO MODE ACTIVE" banner and the pulsing amber DEMO pill are your exit hatch: drag it anywhere, tap × Exit anytime.

Demo Mode: full app, sample family data

Demo detail view — the DEMO pill is always visible

CHAPTER 2

The Today Tab

Home base: your family's whole health day, the moment you open the app.

6 **Today tour: greeting + Up Next**

A personalized greeting, today's date, and every health event today — appointments with times, locations, and who's who. Nothing to configure.

7 **Daily Intelligence Digest (IDDU Pulse)**

iddu reads your schedule and types out a two-sentence briefing each day, live — like a chief of staff for your family's health. It tells you what matters before you ask.

8 **Monthly Insights + Milestone Moments**

28-day stats in plain English — visit counts, categories — plus achievements for the unglamorous wins: checkups completed, streaks kept.

9 **Family Wellness Radar**

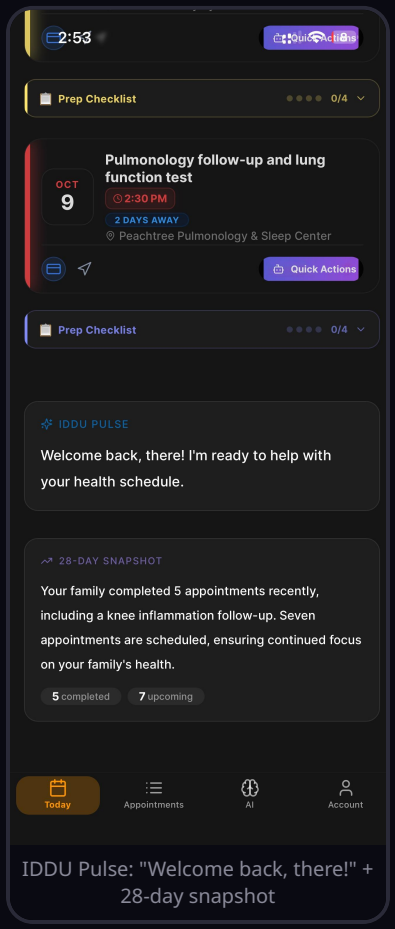

Member avatars as filter chips: one tap on a face filters the entire day to that person. Four people's healthcare, four faces — not four calendars.

10 **Notifications + official announcements**

Bell with unread count, Clear All, mark-read and delete — plus full-screen official announcements you swipe to acknowledge, so critical updates never drown.

11 **Calendar month view**

Every appointment as dots on days across months, with family-member filtering. The whole family's healthcare, one calendar.

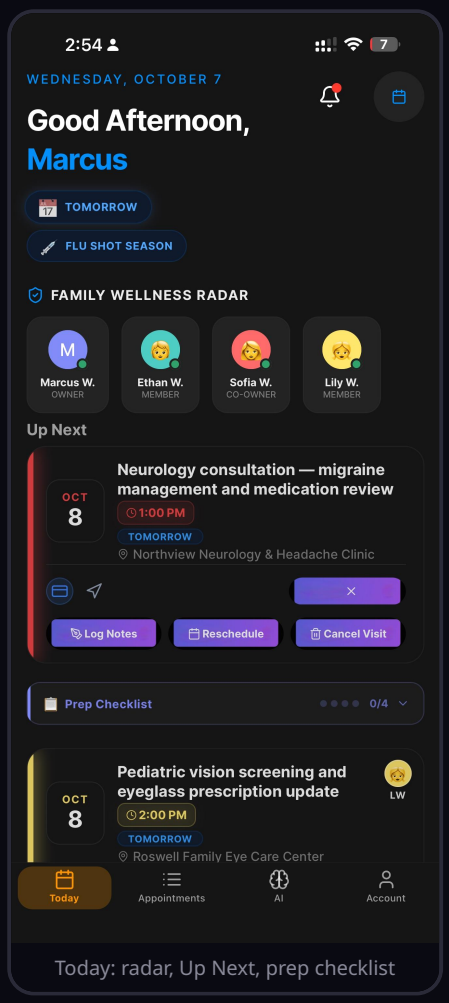

IDDU Pulse: "Welcome back, there!" + 28-day snapshot

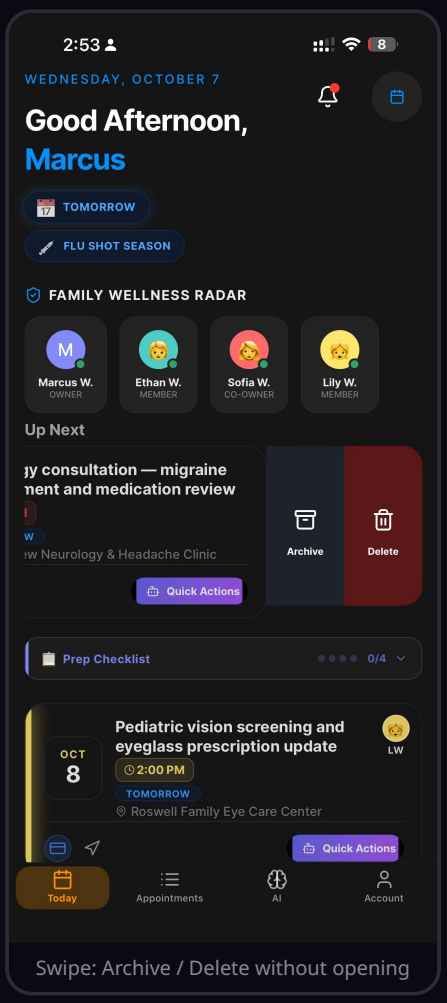

CHAPTER 2 (CONTINUED)

The Today Tab Up Close

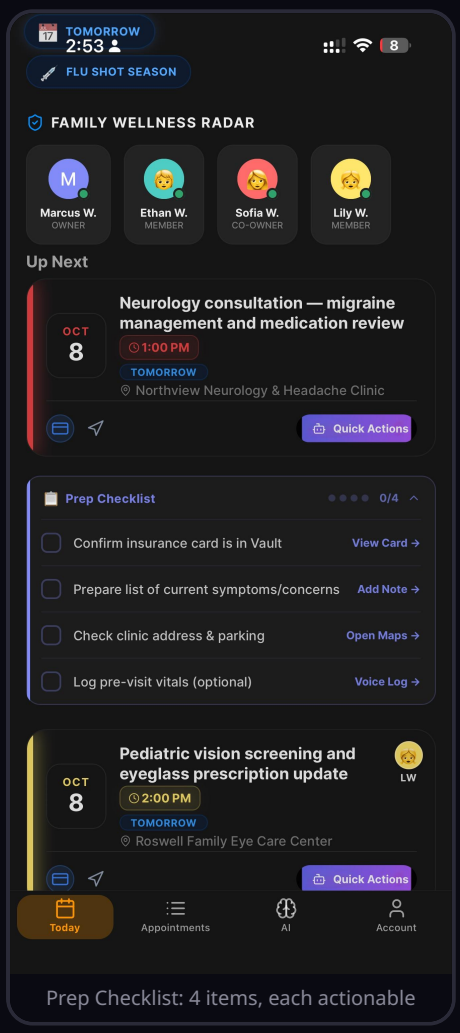

Radar, Up Next, swipe actions, and the prep checklist — the real thing.

Today: radar, Up Next, prep checklist

Swipe: Archive / Delete without opening

Prep Checklist: 4 items, each actionable

CHAPTER 3

Appointment Detail

The only screen you need at check-in — dense, readable, and complete.

12

The check-in screen

Huge readable time, a live "Starts in" countdown ticking down the seconds, clinic name and full address. When the receptionist asks "what time is your appointment," you just look.

13

Insurance card: 3D flip + share SHOWPIECE

Tap the card and it flips in 3D — back side and all: claims address, phone numbers, deductible, out-of-pocket max. Long-press for full view; text or email it to the front desk as front, back, or PDF.

14

Quick actions: Directions, Call Clinic, AI Agent, Remind Me

Four buttons, four real jobs — maps with the clinic punched in, a leave-on-time nudge, dial the clinic yourself, or hand the whole thing to the AI agent.

15

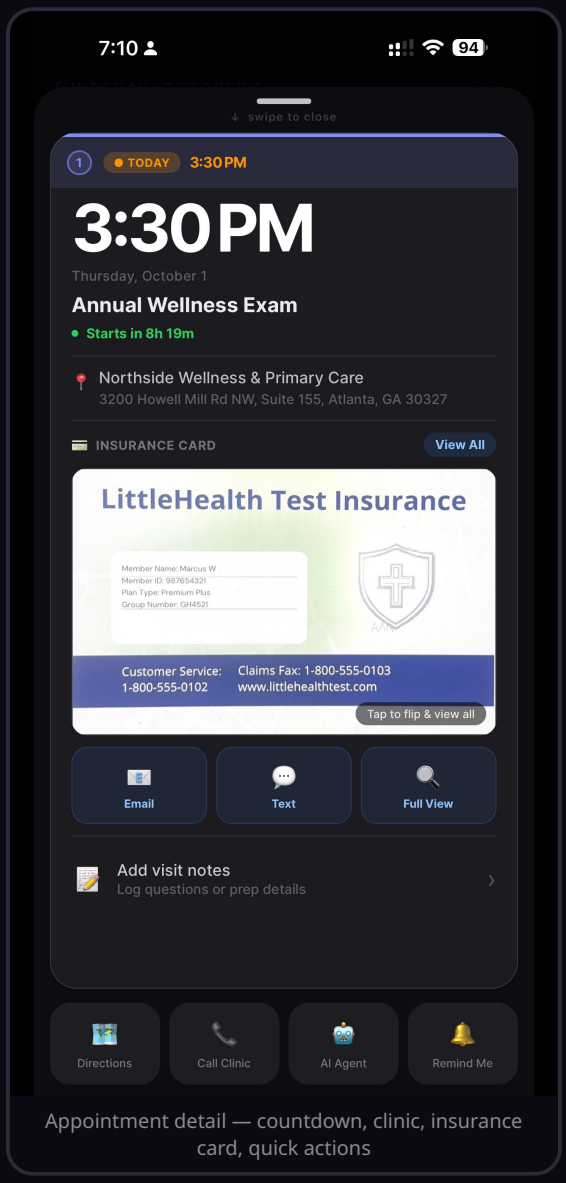

Visit notes + prep checklist

Log questions for the doctor *before* you go, so you never walk out thinking "I forgot to ask." The prep drawer holds fasting instructions and documents to bring — check them off as you go.

16

Reminders

30-minute, 1-hour, 24-hour presets — or any exact date and time. Three per appointment max: the night before, the morning of, and "leave now."

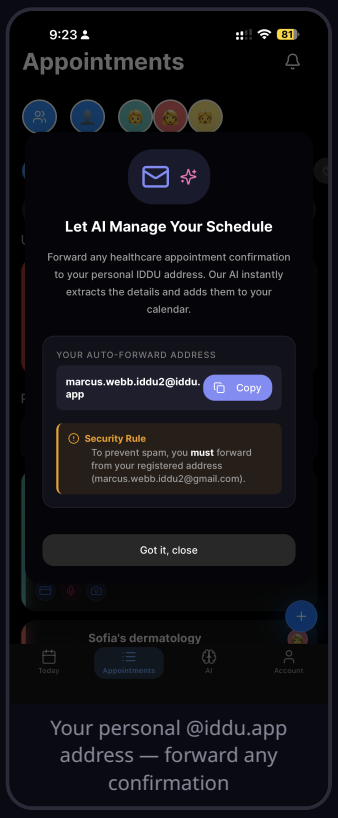

Appointment detail — countdown, clinic, insurance card, quick actions

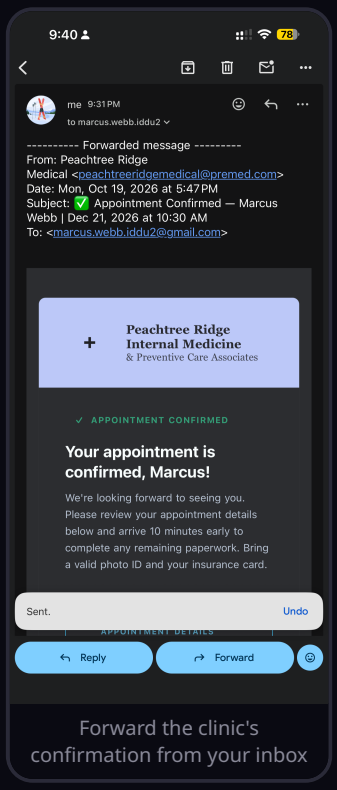

CHAPTER 4

Adding Appointments

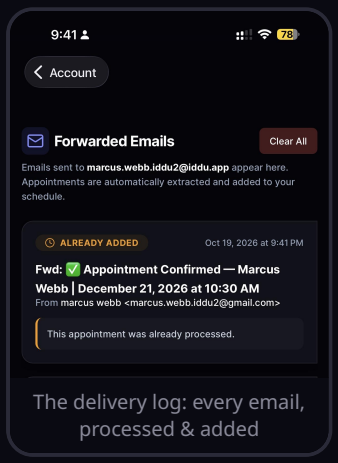

Four ways in, zero friction. Whatever's easiest for you — iddu takes it from there.

Your personal @iddu.app address — forward any confirmation

Forward the clinic's confirmation from your inbox

The delivery log: every email, processed & added

17 The four input methods (overview)

Talk to AI, Scan Document, Email Import, Type it out — one modal, four tiles, every path ending in the same perfect appointment record.

18 Talk to AI (voice input)

Tap the mic and talk like a human: "Dentist appointment next Tuesday at 2 PM for Ethan." The AI pulls out the what, when, and who — no forms, no dropdowns.

19 Scan Document (camera OCR)

Point the camera at a printed appointment card — the AI reads doctor, date, time, address and fills the whole form. Paper in, appointment out. Gallery import included.

20 Email Import MAGIC

Every user gets a private @iddu.app address. Forward any confirmation email to it — seconds later the appointment appears, fully extracted. The delivery log shows exactly what iddu did with every email.

21 Type it out (manual form)

For the traditionalists: title, who's it for, date/time pickers, Google Places location autocomplete, Mark as Favorite, reminders. Grandparent-approved.

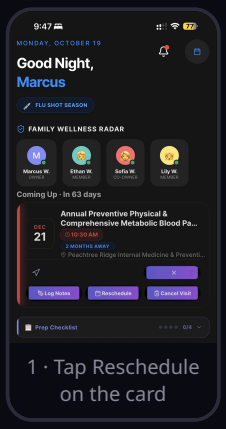

22 Voice smart-note recorder

Ramble into the recorder — "Mom has a cardiologist follow-up Thursday morning, ask about the new medication" — and the AI files it as structured data plus a smart note. A voice memo that files itself.

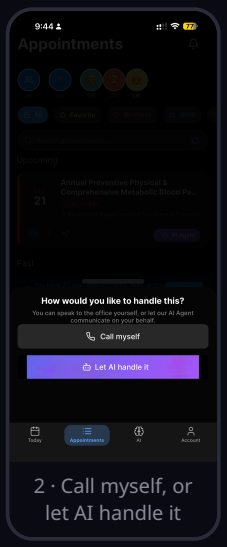

CHAPTER 5 — PART A

AI Voice Calling

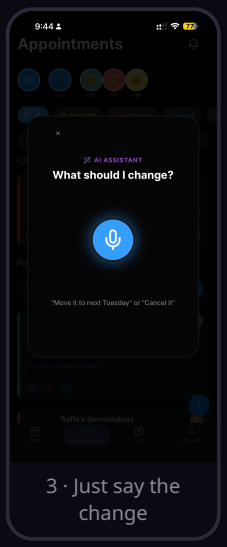

Alex, the AI agent, calls the clinic for you: Deepgram speech recognition, GPT reasoning, natural voice. Twenty minutes on hold becomes twenty seconds of your time.

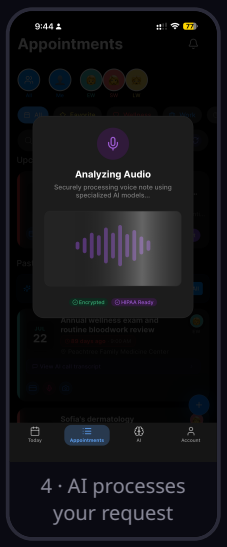

1 · Tap Reschedule on the card

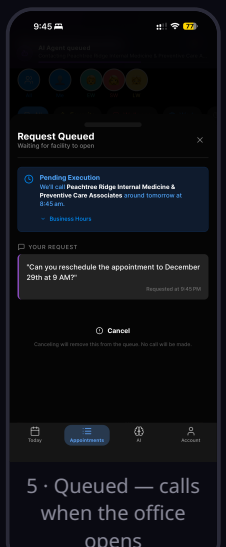

2 · Call myself, or let AI handle it

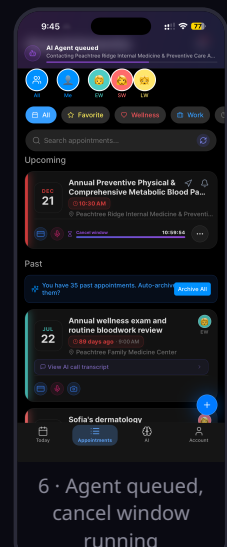

3 · Just say the change

4 · AI processes your request

5 · Queued — calls when the office opens

6 · Agent queued, cancel window running

23 "Let AI handle it": requesting a call

One decision: call the clinic yourself, or hand it to Alex — which already knows the patient, the appointment, and what you asked. Your plan's usage is stated upfront; no surprise limits.

24 The 5-minute buffer

After you ask, iddu waits five minutes before dialing — in case you mistyped. "View Request Details" shows exactly what the AI was told, word for word. Confident? "Call Now." Changed your mind? Cancel, no harm done.

25 Watching it work: the call status banner

The banner narrates everything live: reaching out… waiting for the office to open… confirmed. If the office is closed, it waits for opening hours and calls then — automatically.

26 The disclosure: first 5 seconds of every call TRUST

"Hi, I'm Alex, an AI assistant — this call may be recorded." No pretending to be human, ever. Hits voicemail? Says nothing and hangs up; a human follows up instead.

27 Identity verification: DOB + spelling protocol

DOB spoken as natural language ("March fifteenth"), never rattled off next to the name. Tricky last name? NATO-style: "Webb — Whiskey Echo Bravo Bravo." One question, one answer, no oversharing.

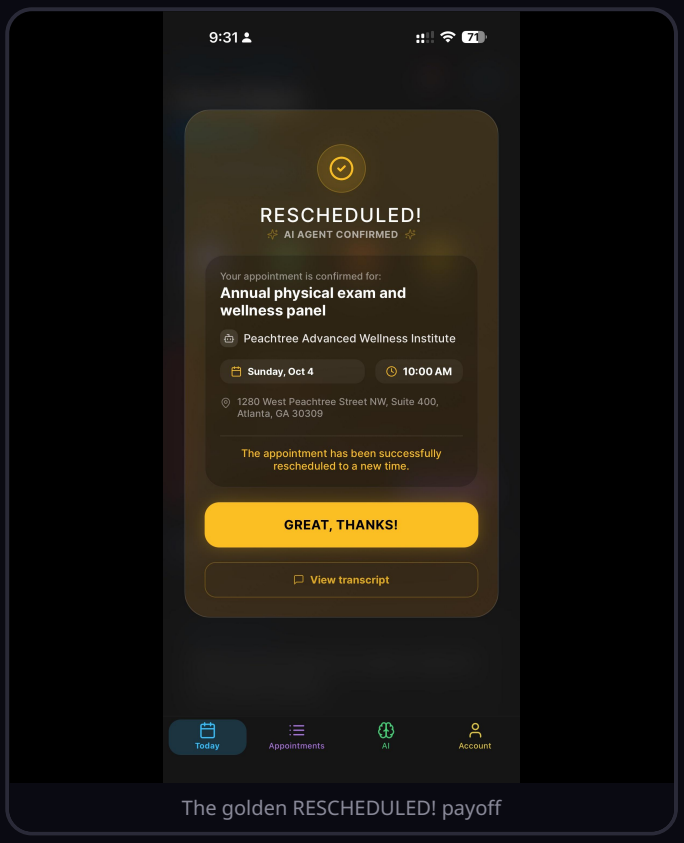

28 The negotiation: full date read-back

Thursday's full? Alex takes the Friday 10 AM offer — then reads back the full absolute date and time so both sides confirm the same reality. That read-back is what prevents wrong-day disasters.

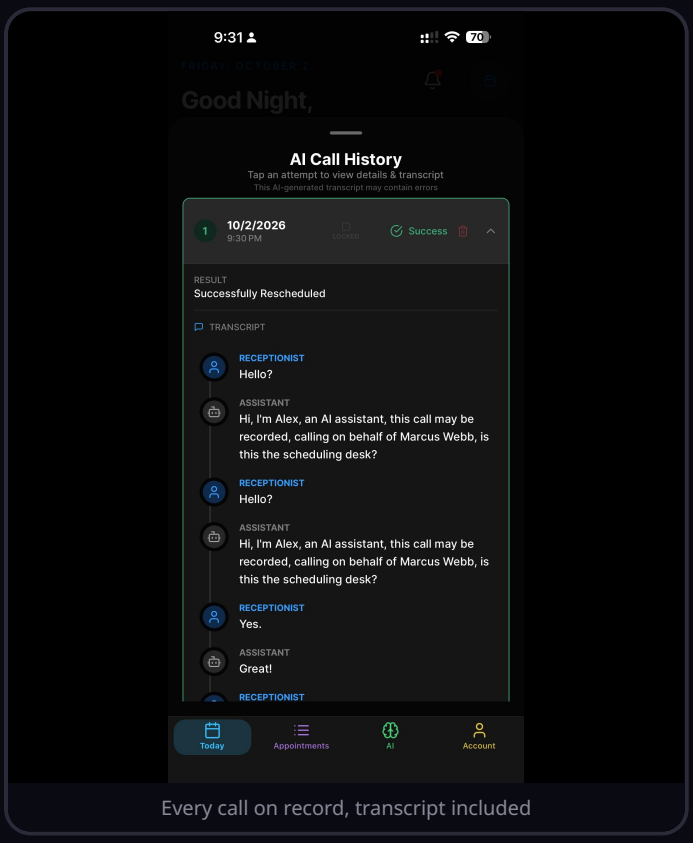

CHAPTER 5 — PART B

AI Voice Calling (continued)

The payoff, the proof, and the guardrails that make it trustworthy.

The golden RESCHEDULED! payoff

Every call on record, transcript included

29 WOW Success Overlay: RESCHEDULED! HERO

The golden "WOW" screen — new date, new time, confirmed by the AI agent. One tap to thank it, or view the full transcript. Sibling states: CANCELLED!, NO CHANGE, COULDN'T REACH, VOICEMAIL LEFT.

30 AI Call History: every word, on record

Full transcripts with a timeline UI, an honesty label ("AI-generated transcript may contain errors"), audio playback — and on Premium Plus, permanent deletion of a call record. Your data, your control.

31 Navigating phone menus (IVR)

Alex waits for the menu to finish, presses digits in engineered silence — no robotic narration — and starts talking when a human answers. When in doubt, it assumes human.

32 Hold music? No problem.

On hold, Alex goes completely silent — no breathing, no filler. On return: "Oh hi, thanks for picking up!" Transferred? It restarts politely with the new person.

33 When a clinic says no to AI

One warm apology, hang up, no arguing. The app tells you honestly the office declined and hands you the number. Graceful defeat is a feature.

34 AI talking to AI

Detects the clinic's own AI receptionist and switches to short, simple machine-to-machine sentences. Two loops of circles and it asks for a human.

35 The 6-minute rule + what a call costs

No call runs past six minutes — a polite spoken wrap-up at 5:40, clean disconnect at 6:00. Every call metered to the cent (~$0.068/min): the 3-minute call that saved you twenty on hold costs about twenty cents.

CHAPTER 5 — PART C

AI Voice Calling (setup & safety)

Calibrate once, then trust it — with guardrails that keep you in control.

36 **The cancel call (short version)**

A shorter script with no negotiation phase: states the cancellation, confirms it, gets out. If the receptionist pushes a reschedule, it politely declines — it does exactly what you asked.

37 **Calibrate Your AI (setup wizard)**

Three steps before Alex ever dials: your date of birth (clinics require it), an optional callback number verified by SMS code, and your home address for facility matching. Labeled zero-trust, end-to-end encrypted.

38 **AI Persona Center: teach it your preferences** PREMIUM

"Your AI's Brain": the Identity Vault holds insurance details clinics ask for; Negotiation Rules set soft wishes ("prefer mornings") and hard constraints ("never accept Fridays after 3") the agent will not break.

39 **Guardrails: too-close, busy, queued-after-hours**

Too close to the appointment? The AI won't call — it hands you the clinic's number. One call at a time. Office closed? Queued until opening. Mid-call, cancel locks with an honest message. Guardrails are why you can trust it.

40 **Live demo call** FLAGSHIP

Two free demo calls per user, no account needed: Alex calls a real demo dental clinic, connects in ~15 seconds, and you listen on speaker. The transcript saves to the app. Make Alex prove itself.

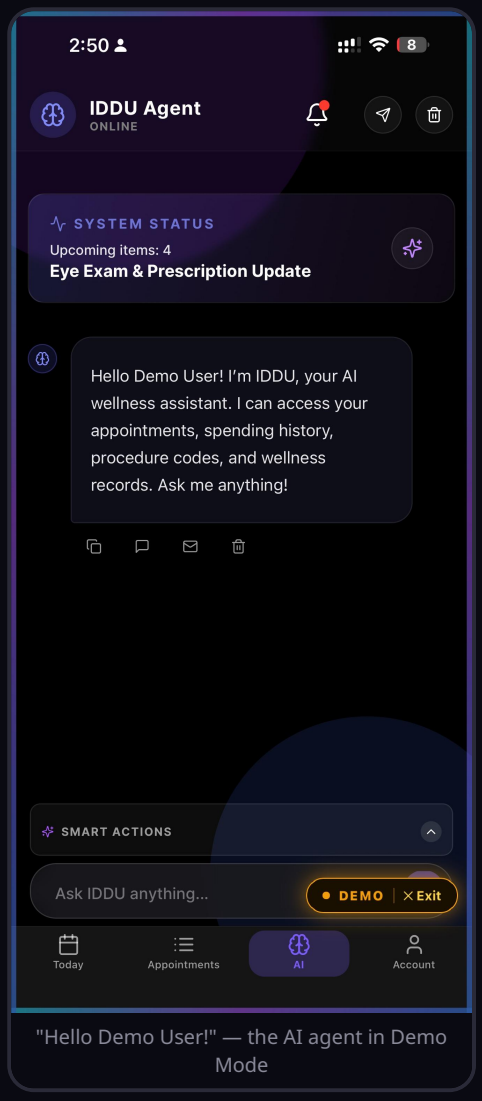

41 **Role-play: YOU are the receptionist**

"Call Me Now" places a real call to your registered number. Answer it, grill it — ask for the DOB, offer a terrible slot. The closest you can get to test-driving an AI agent with zero risk.

CHAPTER 6

AI Tab & Appointments Tab

iddu's brain in chat form — plus your complete history and future in one place.

"Hello Demo User!" — the AI agent in Demo Mode

42 IDDU AI chat: ask anything

Not a generic chatbot — it sees your appointments, spending, procedure codes. "What do I owe?" gets answered from YOUR records. "When is Mom's next appointment?" It knows the family too.

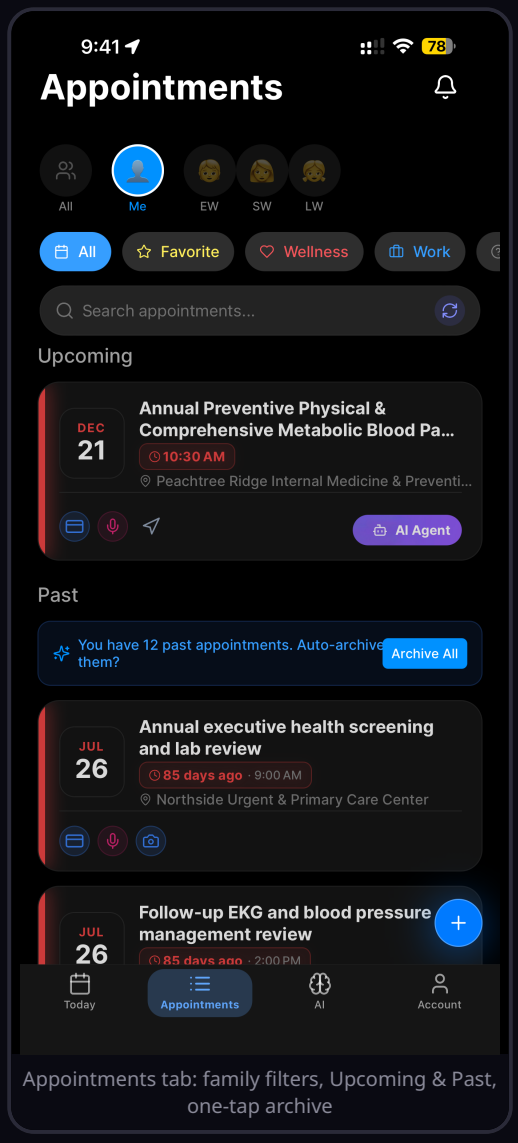

43 Smart Actions + export

Suggestion chips for the questions that matter — biggest unpaid balance, who's due for a visit, this year's spending. One tap, instant answer; export anything as a clean PDF.

CHAPTER 6 — CONTINUED

Appointments Tab

Every appointment — past, present, future — in one searchable place.

Appointments tab: family filters, Upcoming & Past, one-tap archive

44 **Appointments tab: filters, archive, search**

Filter by type or family member; archive instead of delete — it's filed, never gone. Years of healthcare, searchable in seconds.

45 **The floating + button (speed dial)**

Draggable anywhere on screen, always under your thumb. Tap to expand all four add methods — from anywhere in the app.

46 **Document Vault: medical paperwork, decoded** PREMIUM

Every bill, EOB, and invoice decoded into plain English — billed, paid, YOU owe, line by line. Balance hits zero? "Nothing Owed" with a party emoji. The most satisfying screen in healthcare.

CHAPTER 7

Account

Family, security, money, and your data — mission control for the household.

47 Profile + phone verification

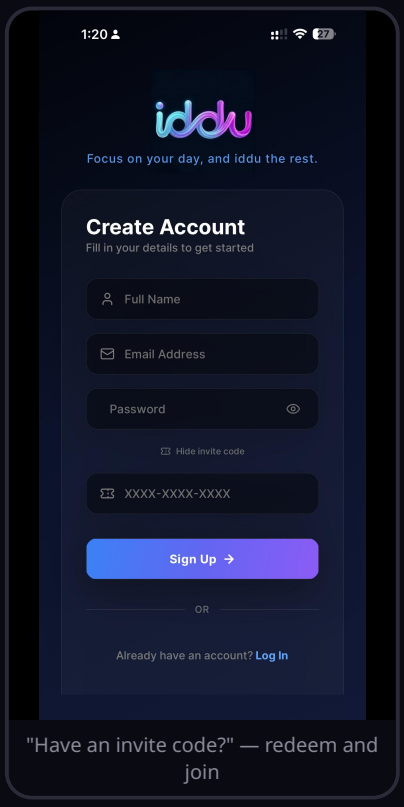

The details clinics need — with a nice touch: type your address and iddu derives your timezone automatically. Phone changes verified by SMS code.

48 Security Center: MFA, trusted devices, recovery codes

Every trusted device listed, one tap to reset them all, and downloadable emergency recovery codes. Lose your phone? You're not locked out of your family's health records.

49 My Family: invites, roles, Co-Owners

Invite anyone with a 12-character code — they redeem it and they're in, with their own appointments and private email address. Make your spouse a Co-Owner and share the mental load.

"Have an invite code?" — redeem and join

50 Subscription & paywall 7-DAY FREE TRIAL

Simple, honest pricing — Basic $4.99/mo, Premium $9.99/mo, every plan with a 7-day free trial. Each tier spelled out with exactly what's included. Locked features get a friendly nudge, not a brick wall. No dark patterns; if you find one, that's a bug report.

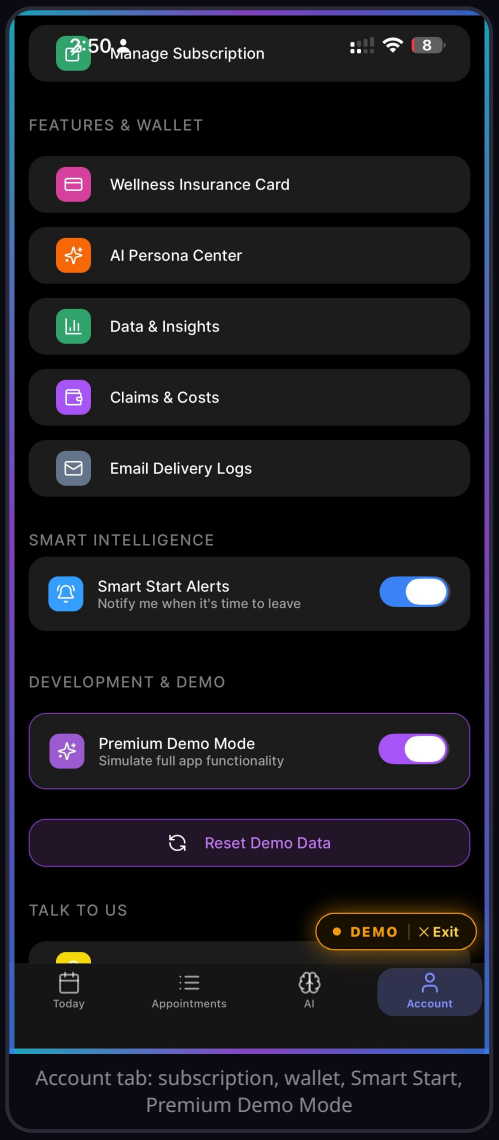

51 Data & Insights: your health in charts PREMIUM

Visit trends, category distribution, monthly volume — and the favorite stat: AI Capture Efficiency, the share of appointments the AI captured automatically, split by email, voice, photo, and manual.

CHAPTER 7 (CONTINUED)

Account: Features & Wallet

Everything the Account tab holds — live in Demo Mode.

Account tab: subscription, wallet, Smart Start, Premium Demo Mode

52

Wellness Wallet: Claims & Costs + export

Every claim in one table with three numbers that matter on top: total charges, out-of-pocket, balance due. Tax season or HSA audit? Export it all as CSV or a formatted PDF.

53

Smart Start Alerts (leave-now) PREMIUM

Not a fixed 30-minute reminder — a living one. iddu watches traffic and tells you when to leave, based on where you are and how the roads look.

54

Feature Request + Feedback

Request a feature with a screenshot attached, or leave a star-rated review. In a family-built app, the distance between your idea and the roadmap is one form.

CHAPTER 8

Backend Magic

Not screens — moments where the backend does something that looks like magic.

55 **Email → appointment in seconds**

Forward a dentist confirmation to your @iddu.app address, pull to refresh — doctor, date, time, address, all extracted. You never typed a word; the delivery log shows the receipt.

56 **Family EOB → per-patient split**

One PDF, four people, inscrutable codes — forwarded to iddu, the AI splits every line item per patient and links each charge to the right appointment. An hour with a highlighter becomes ten seconds.

57 **Two phones, one family (real-time sync)**

Add an appointment on one phone — it appears on the family member's phone instantly via silent push. No refresh button, no "did you get my text."

58 **The call that waits for opening hours**

Queue an AI call at 9 PM for a closed clinic — iddu knows the office hours and dials the moment they open. You asked at night; it delivered in the morning.

59 **The appointment that updates itself** MIC DROP

The appointment says 2:30. Alex calls, negotiates, confirms 10 AM — and the appointment updates itself. No typing, no tapping. Request in, new time out: the entire thesis of iddu.

One app for your family's entire healthcare life.

59 features. Four ways to add. One AI agent that calls the clinic.
Built for the family that has better things to do than wait on hold.

Get iddu — iddu.app
